## GOO GOO DAO PROJECT, DAO Project to Challenge 100% Decentralized Autonomous Organization

The main concept of the GooGoo platform is the Decentralized Autonomous Organization (DAO). Anyone can decorate the community, post announcements, and advertise. All features (ex/top banners, advertising banners, background colors, and so on) for the Web community are published as NFTs, and the holder who owns the NFT has the right to customize them.

**In other words, everyone in the community is a manager.**

We thought about how to use the data called NFT.

By utilizing the meaning of Non Fungible Token, we would like to create a space where each NFT can play a role as an identity.

The final goal of the GooGoo platform is to become a community that can operate reliably with NFTs and tokens without administrators.

### 1) Distribution of Administrative Rights

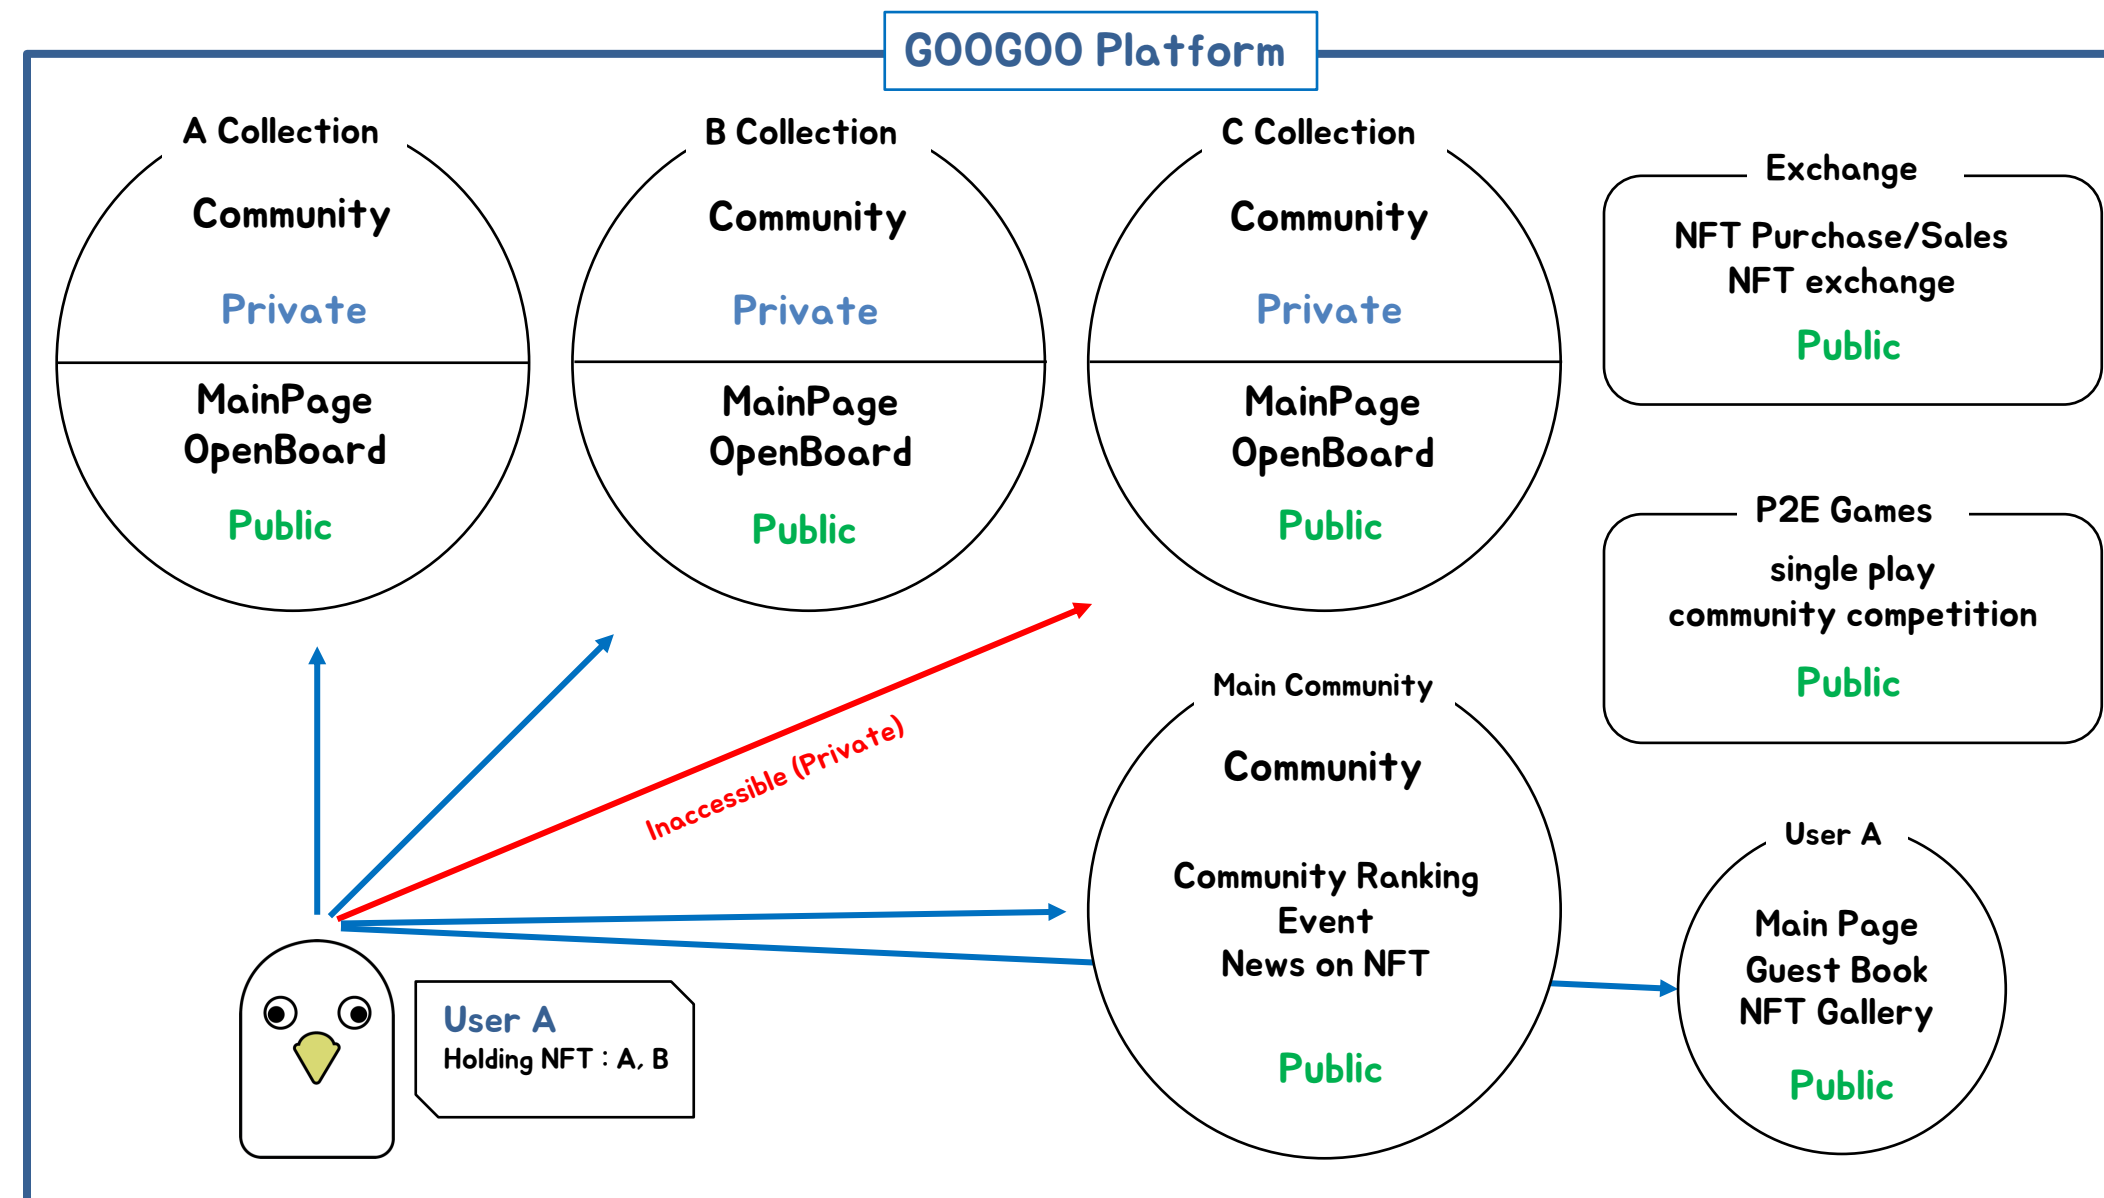

We issue a separate NFT for management authority (ex right banner management authority, main page background color management authority, etc.) so that anyone can obtain management authority by owning the NFT.

### 2) Voting

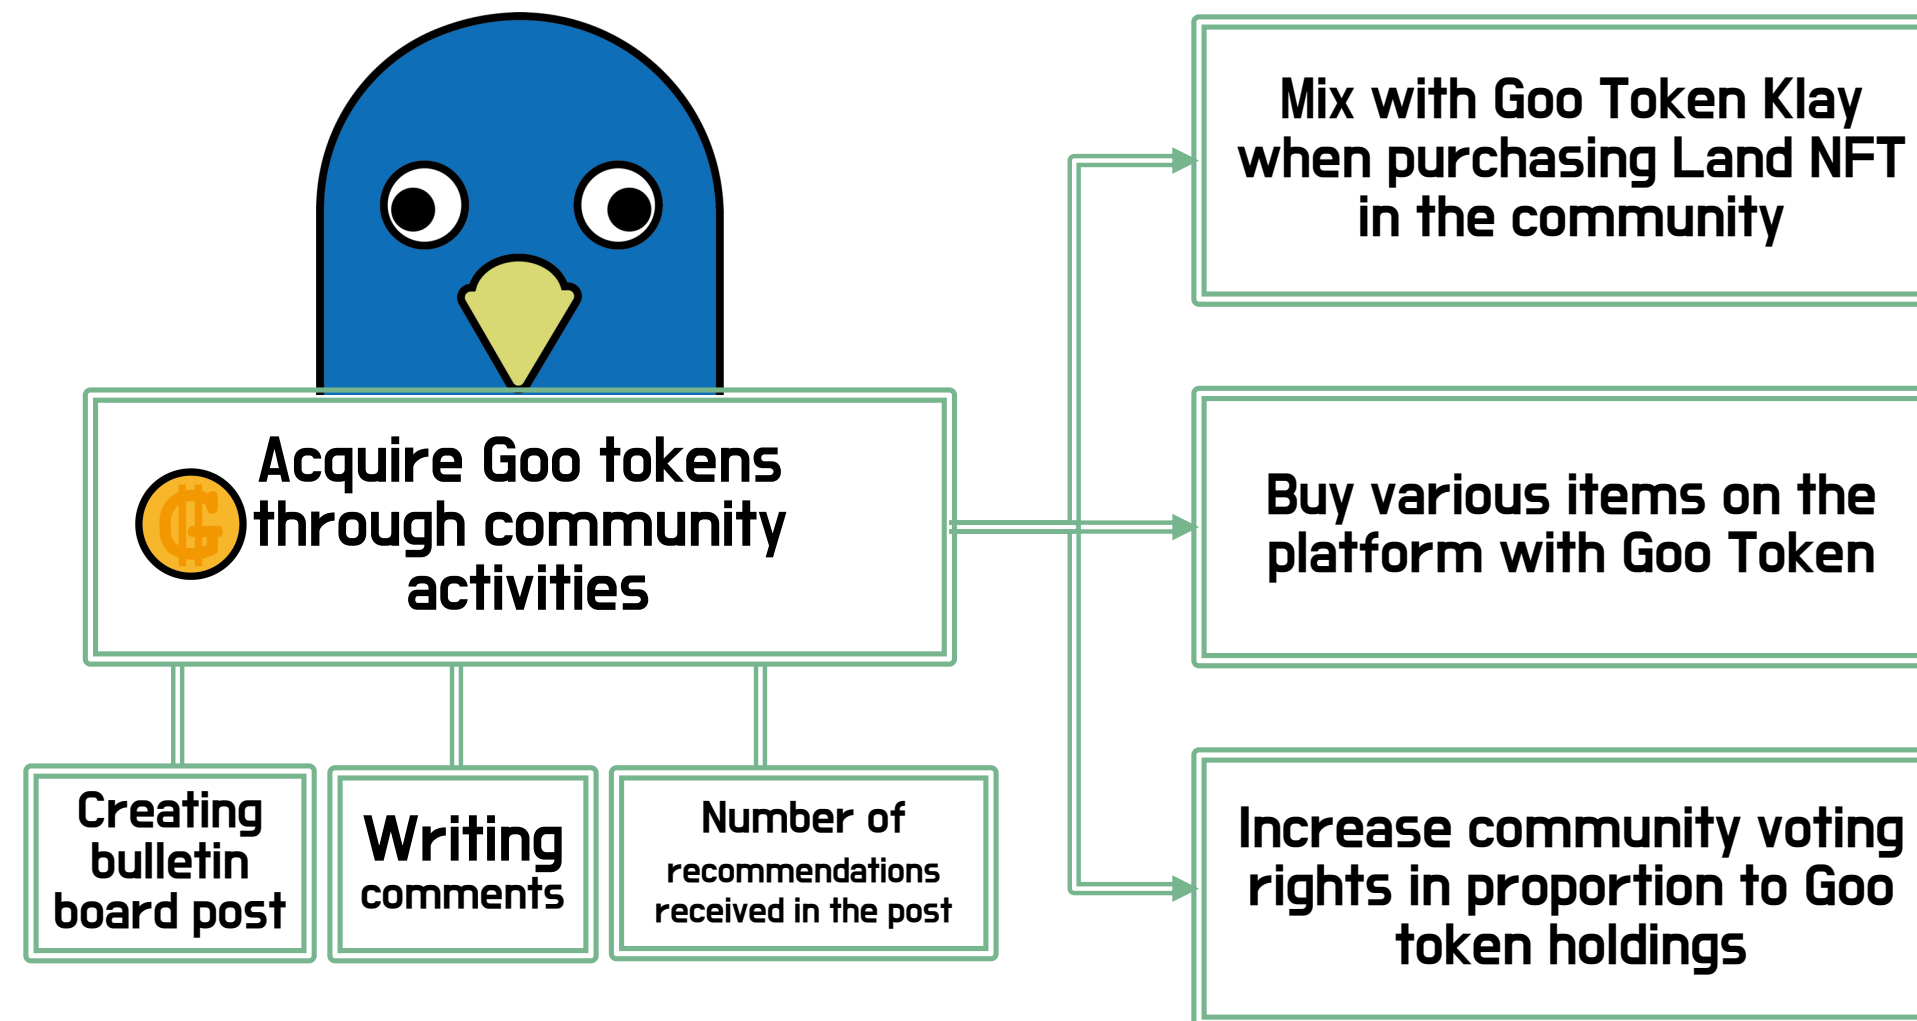

Having a lot of Goo tokens is a sign that he worked hard in the community. Depending on the amount of Goo tokens, voting rights are paid differently.

### 3) Accept all projects

Not only NFTs for a particular project can use the old platform, but anyone who has NFTs in their wallet can be active in the community for their collection.

1. Main Community: The main community is a community where all people who access the site can work. Anyone who is not a participant in the NFT market can participate in the community.
2. Individual NFT Community: Only holders with the NFT can perform activities, and holders without the NFT can view only the main page and the public bulletin board.
3. My Page: Users can not only decorate the community, but of course they can decorate their profiles. You can display or decorate your own NFT in the room.

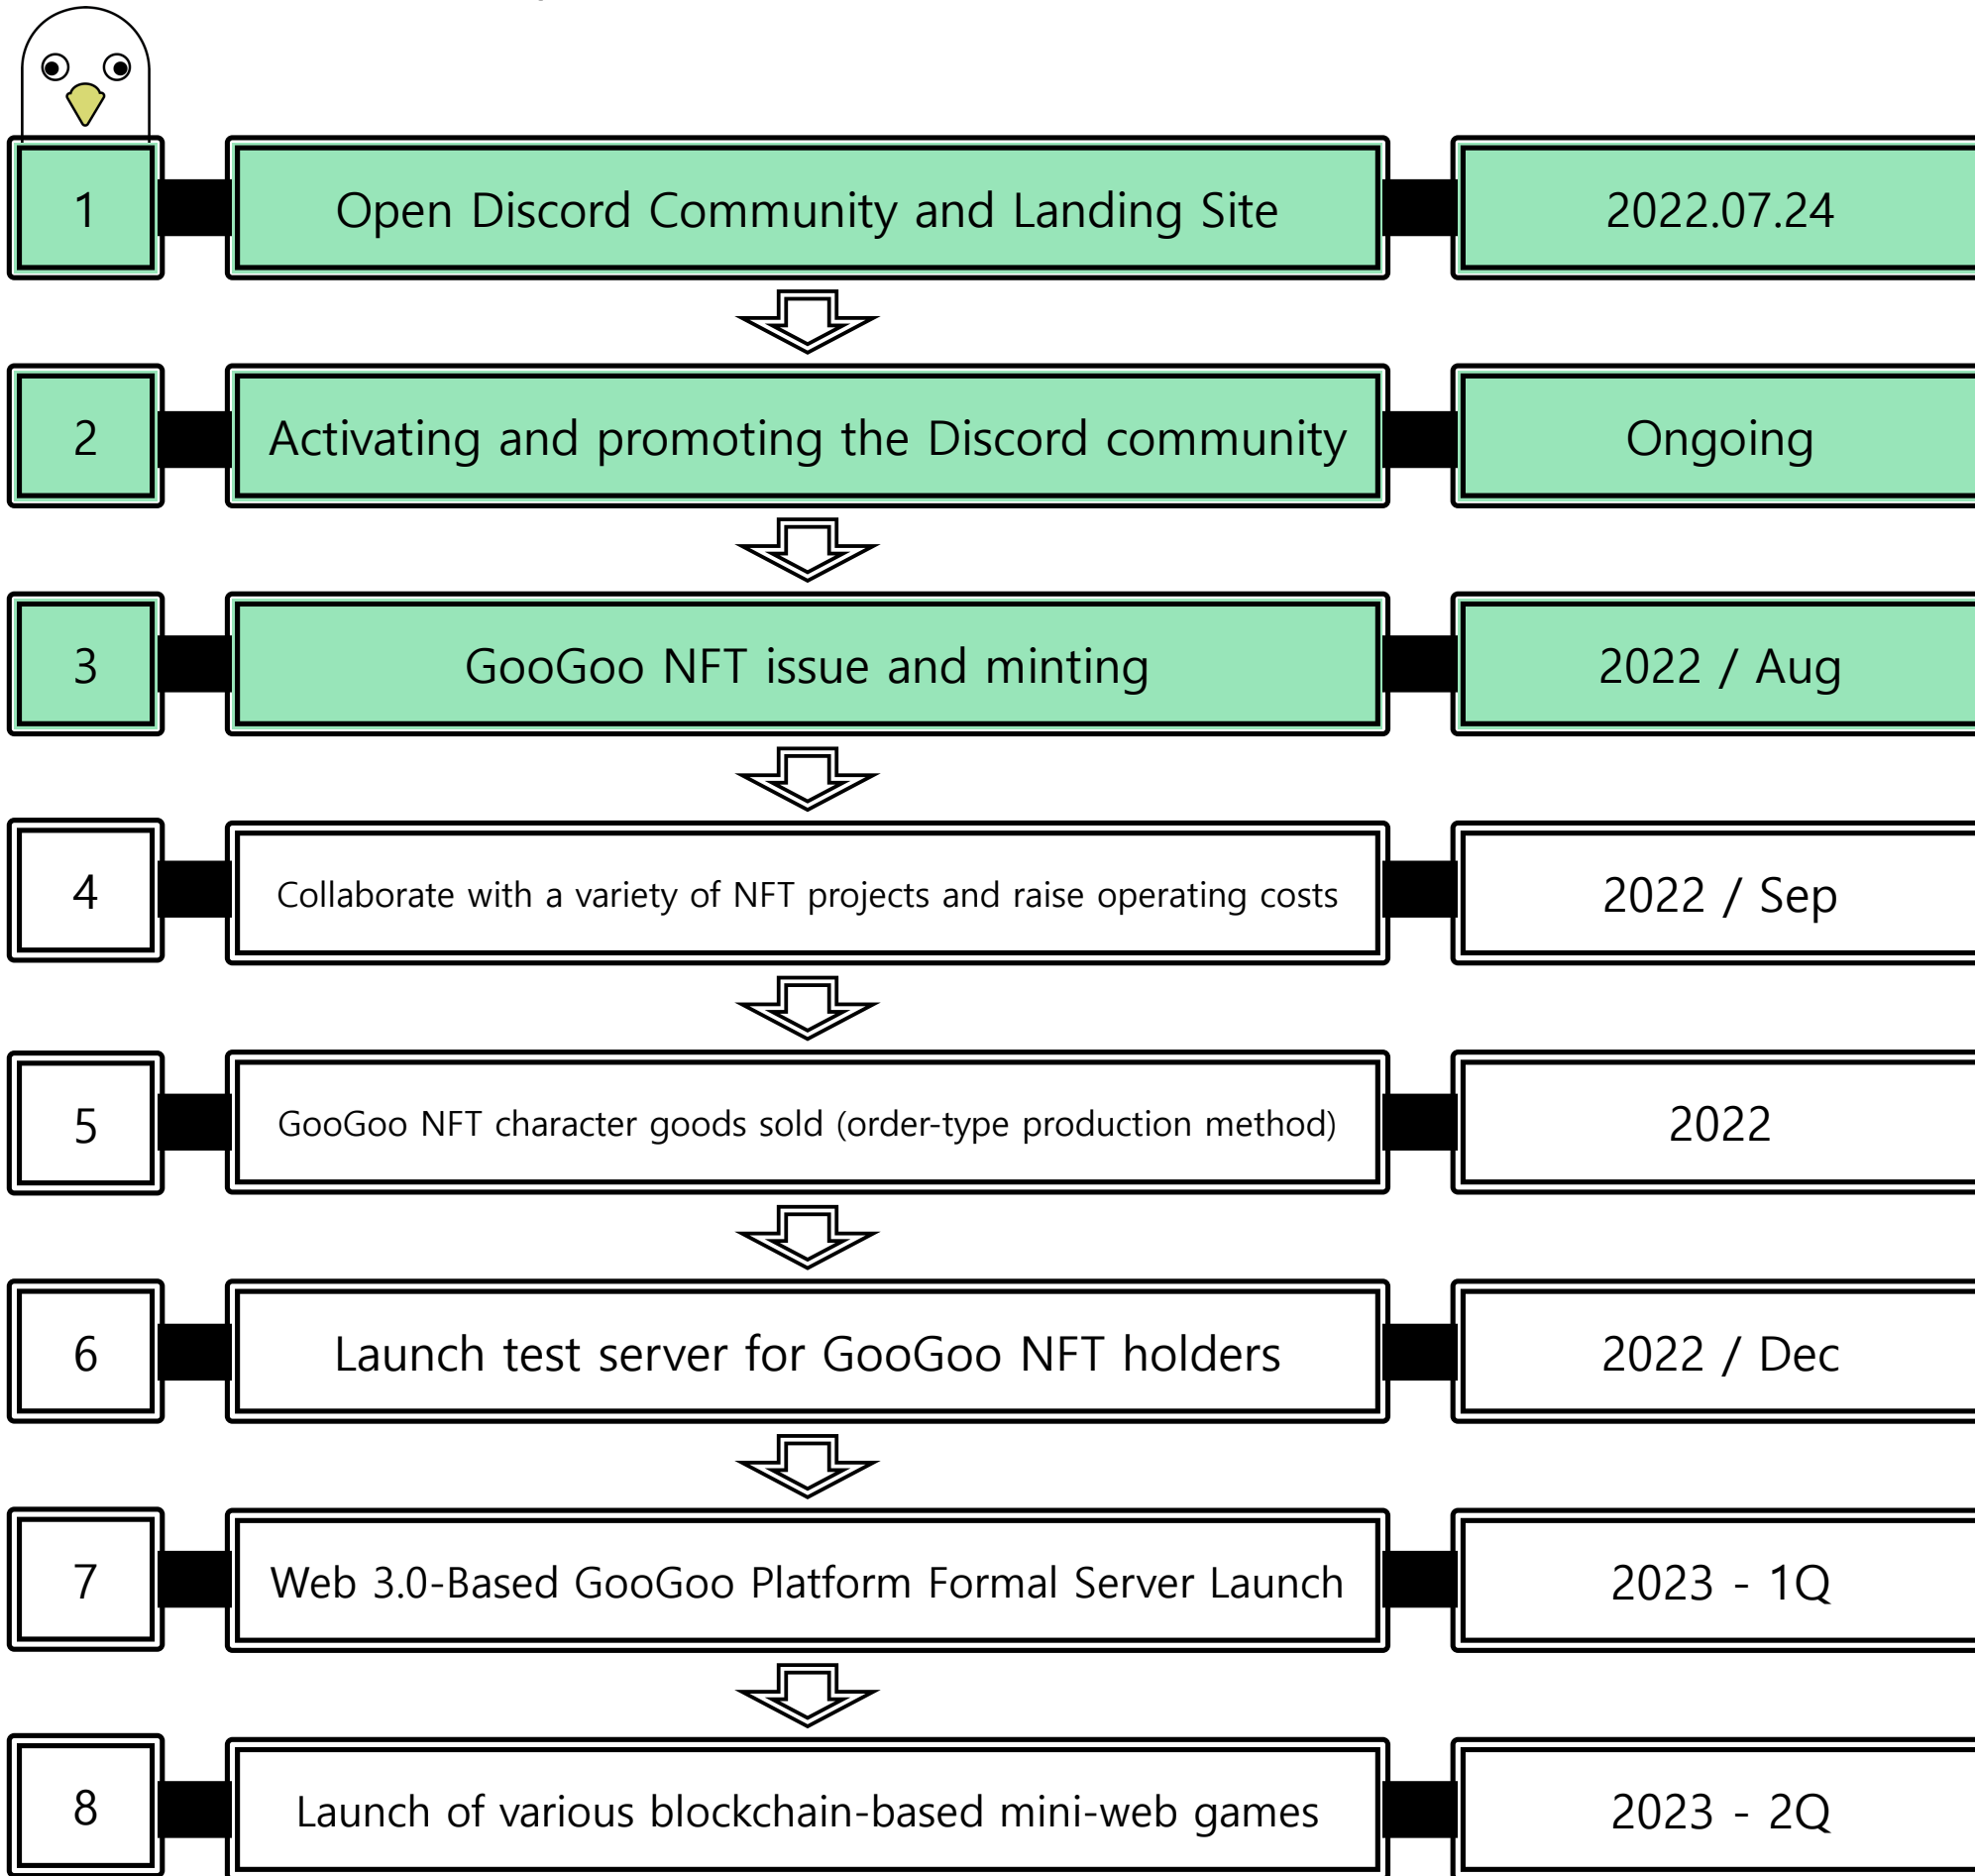

Users can acquire Goo tokens through community activities. Goo token can be used to purchase NFTs or items in the platform.

The biggest use of Goo tokens is voting rights. Communities don't have a central administrator, so all decisions are made by voting

At this time, the more Goo tokens you have, the more voting rights you can exercise. With these token systems, members clean up communities themselves.

## 05 RoadMap

GooGoo DAO

### Establishing a Foundation for Supporting Discord Communities

First of all, DAO activities centered on the discode  
Initiate platform development along with attracting investment  
Becoming an influential DAO in the current NFT domestic market

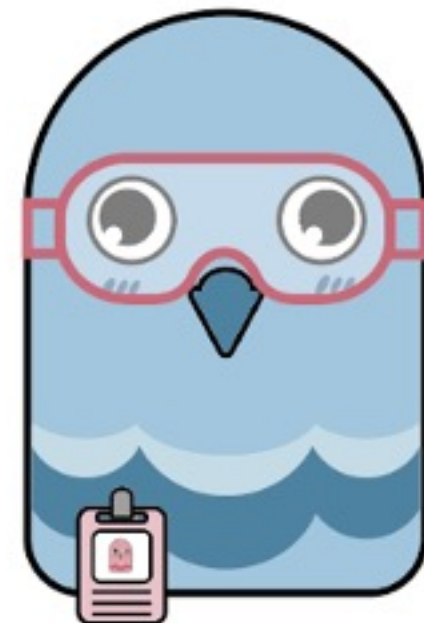

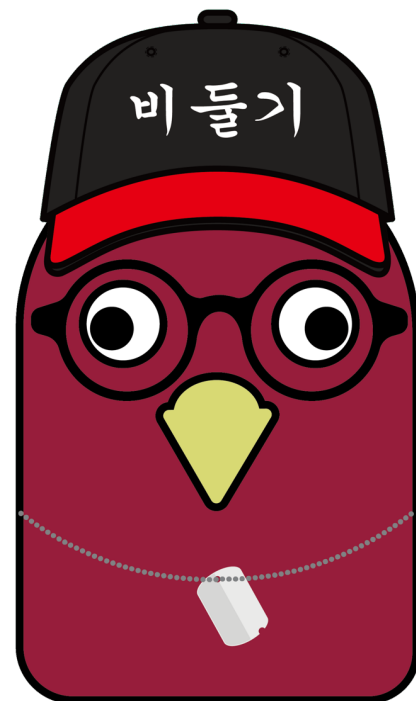

### WEB3.0 NFT Platform

Decentralized, users directly on the old NFT platform  
Create a meeting place to create and revitalize the ecosystem  
Reward reward system plan for activation (Goo token)

### WEB3.0-based variety of content delivery

As a meeting place where various NFT projects gather,  
We released a P2E mini game based on NFT  
various contents such as holding a comprehensive competition

## GooGoo NFT WEB 3.0 NFT Platform Genesis NFT

- **Collaboration Event Benefits**

According to the characteristics of DAO, holders of GooGoo NFT can participate in the collaboration event with a higher entry.

- **Distribution of Profits**

On a Web 3.0-based NFT platform, when tokens are accumulated in Platform Smart Contract, a portion of the tokens will be taken from the

It will be automatically paid to the NFT holder.

You can view GooGoo NFT as a stock for the GooGoo platform.
